

The Collective Leadership Institute –

Building Competence for Sustainability

„We are determined to take the bold and transformative steps which are urgently needed to **shift the world onto a sustainable and resilient path.**”

(See [Agenda 2030](#), Sustainable Development Knowledge Platform, 2015.)

KNOWING WHEN A COLLABORATION PROCESS IS SUITED

All activities at the Collective Leadership Institute (CLI) have one in common; **they all consider the bigger picture and reflect about supportive factors for effectiveness in collaboration from the local to the global level.** Guiding any collaboration processes means to pay attention to the conditions that define a collaboration system. By carrying out feasibility studies CLI reviews the viability of an idea and examines the context to decide if a suggested project, method, or strategy is possible or reasonable.

WE SUPPORT IN CONDUCTING

I. Pre-Feasibility Studies and Readiness Checks /Assessment

When?

→ If a clearly defined outline of a project idea does not exist yet.

How?

→ Support of initial investigation to determine certain aspects and appropriate conditions for the application of a feasibility study, to narrow down the possibilities, and to testify diverse scenarios for a viable project idea

→ Explore and develop project idea by needs analysis, scenario development and testing resonance

Conditions

→ The costs of a pre-feasibility study vary depending on the context. After a first conversation with CLI that outlines the need and purposes by the principal, CLI will send an accurate proposal describing costs, content development, assessment procedure and time-line required.

II. Feasibility Studies

When?

→ An early investigation and exploration of a project idea or scenario is done.

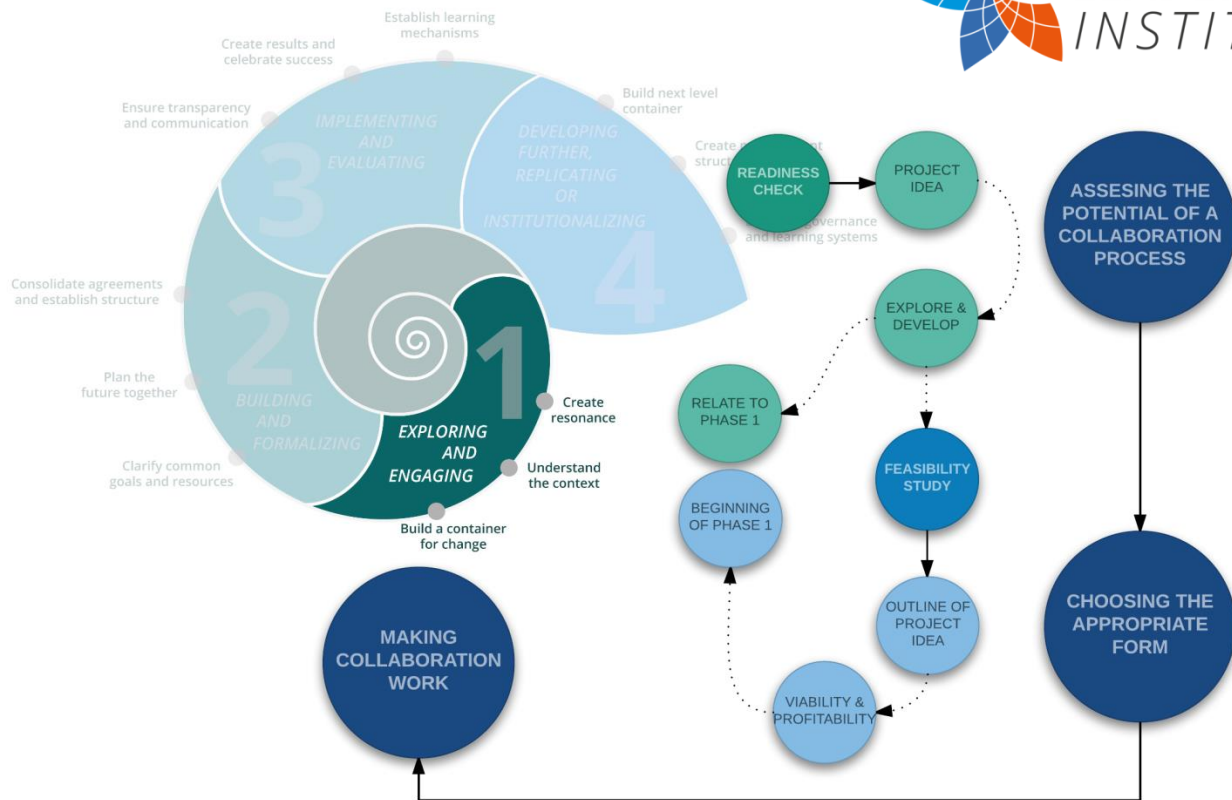

How?

→ Provision of a detailed analysis with respect to viability and profitability of project idea (the elements to include in a feasibility study vary according to the type of project and can be: Focus support, comprehensive information of background knowledge and trends through detailed research, collection of structures with their strengths and necessities, implementation of guided interviews, field trip, clear definition of objectives, indicators and/or impact hypotheses, comparing and contrasting scenarios, and identifying and describing alternatives, estimation of resource allocation, inter alia)

→ Debriefing and discussion of the conclusions with principal

Conditions

→ The costs of a feasibility study vary depending on the context. After a first conversation with CLI that outlines the need and purposes by the principal, CLI will send an accurate proposal describing costs, content development, assessment procedure and time-line required.

Some projects may choose to have a thematic focus, such as water (or nutritional) security, descent work (and entrepreneurship), or civic engagement. A pre-feasibility and/or feasibility study will help to realize a sustainable and viable project.

The challenge presented by the SDGs is increasing collaboration capacity worldwide so that all change processes can be carried out in a peaceful, professional, efficient, and effective way that honors the intention of the global sustainable development movement.

REFERENCES

CLI conducted feasibility studies in the following areas already:

Place/Country/Region	Category
Nairobi, Kenya	TVET
Kairouan, Tunisia	Water Management
Germany	Sustainability and CSR
Ghana	Food and Agriculture
UK / worldwide	Water Management
